# Ergohome chooses android4home

## **Google acquires Motorola in home automation leap**

Through its [www.androidathome.com](http://www.androidathome.com) automation initiative Google has made clear it's intention to integrate portable touch screen computing with domestic control. Last year Motorola itself acquired [www.4home.com](http://www.4home.com) as part of it's own home product plans and just as little fish get eaten by big fish then really big fish come along.

## **Android smart phones a natural partner**

The success of smartphones has made them the natural partner for home automation. In years gone by, expensive and single purpose interactive control centers were the mainstay of any fully featured home install, both expensive and fragile they made such systems the preserve of only wealthy folk. Google has identified that with clever "APP" creation and home partner software that an affordable and intuitive home automation solution can be offered to the wider public.

## **Ergohome a pioneer in remote control**

Our home product was conceived at the outset for these expected developments, to bring advanced and intuitive home automation to benefit our customers. We have offered [iPhone controlled](#) under floor heating solutions with our standard product for a couple of years now. We plan to expand this to the growing android user base as the android4home offer matures.

### TABLET PC CONTROL

### LEAVE HOME ATTENDED

Home monitoring, real-time alerts and notifications are delivered to subscribers wherever they are via mobile device, PC or TV.

### REMOTE MONITORING & CONTROL

Supervise energy consumption  
Toggle between appliances  
Control heating and ventilation

## **Ergohome and our automation vision**

Our design leadership has incorporated [electric windows](#), [whole house ventilation](#), wireless light switches and [services dashboard](#) right from the blueprint stage in our product with the ultimate vision of complete automation. We believe that whether it is out of care and concern for your family or from an eco/energy responsibility point of view you need to know what is happening at home when you are away and even better, control it all from your phone or tablet.
