Ready ■ Affordable ■ Sustainable

Ergohome. A new living concept, ready for delivery, at an affordable price also including sustainable features that are built-in as standard.

A small factory-built home targeted at first and last homeowners. Engineered with ergonomic features, low energy consumption and high quality.

Ready For You

The Ergohome is delivered to site, finished to your specification and ready for immediate use. Our Castaway Cabin model can be up and running in a matter of hours. Our house-on-legs design allows us to set up quickly, minimising ground works and getting you living faster. Re-deploy to suit yourself; the ErgoHome can be simply re-deployed when your life changes. It could be a garden home, student digs or a commuter crash pad. What would you use it for?

Affordable for today's generation

Factory-built efficiency delivers high quality and low costs

A new ErgoHome costs considerably less than £100K, comparing favourably in price to many of the older homes for sale today in the UK. A new ErgoHome incorporates the latest high performance features absent from & expensive to retrofit into existing housing. Heating costs are reduced by the Insulated panels used throughout the floor, wall and roof, also the careful use of "passive solar" design.

Sustainable design - Lower your carbon footprint

ErgoHome has been designed expressly to reduce domestic carbon dioxide emissions. We have made careful material selection for quality, longevity & weight, designed effective insulation with controlled ventilation & incorporated renewable energy options built in from the start. The latest in energy saving technology is fitted throughout. Under floor heating can be complimented with solar panels on the roof. Low energy lighting such as compact fluorescent & LED is fitted throughout. Durable for a lifetime of use, our philosophy is all about giving you a trouble-free life. The chassis & timber frame have a design-life of 60 years, which could be extended through surveyor approval.

Ergohome Launched at Interbuild 18th-21st October 2009

ErgoHome "drive-out drive-in" delivery method is proven. The unit was collected from our Edgbaston test site & delivered to the National Exhibition Centre only 30 minutes later.
