## Ergohome incorporates "nanotech" solutions

**Nanotechnology** deals with matter on an atomic and molecular scale in structures of the size 100 nanometres or even smaller. You are probably already using first generation "passive nanotech" without even knowing it (in products such as sunscreen or food packaging).

Ergohome has deployed these revolutionary treatments to save you time and money. They improve thermal performance, reduce water permeability and shed dirt.

### Keeps you warm and saves on cleaning

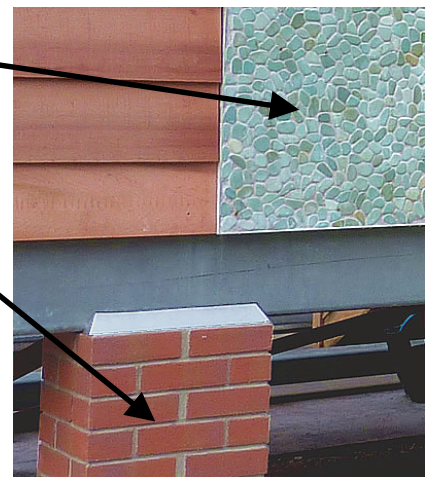

Nanotech mixed in our paint actually reflects heat back into the room. It also resists condensation issues whilst resisting ingrained dirt.

### NanoTech

### Outside Protection

We use nanotech for brick column and stone pebble. These cladding aspects are coated to shed water, keep clean and prevent frost damage.

We have plans to integrate even more significant nanotech in due course, all part of our promise to ensure very low maintenance costs and to deliver Ergohome longevity.
