A dashboard to “drive” your Ergohome and save the planet

Ergohome is the most advanced “factory finished” home in the world. It incorporates state of the art eco-technologies that are easy to control and save residents money. Similar to a road vehicle we have drawn together all services into a single dashboard. No longer do homeowners have to rummage in cupboards, climb on ladders or go outside in the rain to see their utility consumption. They simply raise the curtain to reveal a “dashboard” where all the home’s services are displayed and controlled.

Key:

- 1) Electrical consumer unit
- 2) Economy7 immersion controller
- 3) Zigbee Energy monitor
- 4) UFH heating controller
- 5) MVHR fan speed controller
- 6) Wireless MiFi router
- 7) Smart screen BMS

Building Management System

We offer* a smart screen touch pad building management system (BMS) that toggles between the vital signs for your Ergohome. The tablet computer integrates services into a single interface and optimizes services according to your personal occupation rhythms. Our BMS is capable in the areas of:

- Heating and ventilation
- Lighting and power
- Fire/security/access
- Monitoring and remote control

*depending on specification

Invisible technology with monitoring and remote control

Most of the real technology is invisibly hidden away with renewable panels on the roof and heating under the floor. The dashboard is just a simple human interface with dials, time clocks and switches. We offer variants such as “iPhone remote controlled heating” and Ergohome “vital signs alerts” where your domestic systems are in constant monitoring and reporting modes thereby supplying occupants or carers with timely updates or warnings as appropriate.

Total convenience with our concierge service

The dashboard helps residents minimize their carbon footprint by very clearly showing the different services consuming different resources in a single place. We recognise that some older occupants will still find these modern controls bewildering so we offer a “concierge service agent” Those homeowners can simply ignore the dashboard; instead communicate directly with their assigned agent. A concierge services team will chat to occupiers, understand their individual needs and handle all Ergohome configuration, changes and vital signs alerts or updates.

Living in an Ergohome is quick and easy, we deliver units ready to use, next-day!
